COMPANY

Who we are

LICENSE	IFZA 85927 — Dubai, UAE
MANDATE	B2B institutional counterparties only
METALS	Gold · silver · copper
NETWORK	Dubai · Switzerland · Liechtenstein · Hong Kong
HOURS	Monday – Friday, 8am – 5pm GST

AULM Precious Metal Trader is an IFZA-licensed B2B desk in Dubai. We work with family offices, licensed commodity traders, investment funds, refiners and other qualified counterparties. We do not take retail clients, walk-in buyers, or undocumented metal.

The company is Swiss-German in origin, backed by Liechtenstein, and licensed in the UAE. The operating desk sits in Dubai Digital Park. Trading, compliance, origination and settlement are run as one book — not as a chain of brokers who never see the lot.

We buy doré and scrap at LBMA-linked terms when the papers clear. We sell allocated LBMA bullion. Every accepted mandate carries documented chain of custody and bank-to-bank settlement. One counterparty from origination to delivery.

From African corridors to assay, partner refining and secure delivery worldwide, the same desk is on the file. Custody is arranged to client specification — TransGuard, Brinks, Loomis and partners — with interim storage in Dubai where the mandate requires it.

New counterparties complete KYC/KYB, identity verification and an e-meeting before any appointment at the Dubai office and before any lot is priced as a firm trade. Procedure, not theatre.

COMPANY

What we do

AULM is a physical metals desk. We source, inspect, move, assay and settle gold, silver and copper for institutional books. We are not a bank, not a payment institution, and not a retail coin shop. We do not hold client funds. We do not issue instruments to third-party financiers.

The work is end-to-end when the relationship is mandated that way: origination and collection, OECD due diligence on origin, independent assay, partner refining in Dubai, insured movement, and delivery into a named vault or plant. Counterparties deal with AULM — not a stack of intermediaries taking a spread on a lot they never touched.

Desk capabilities

- Physical gold trading — doré, bullion, nuggets, dust and scrap on documented lots.
- Silver — bars, grain and industrial form; same KYC stack as gold.
- Copper — cathode and wire rod for industrial offtake, documented origin.
- Structured procurement and offtake on continuous mandates.
- Partner refining, 48-hour fire assay, LBMA-linked or non-LBMA exit as the mandate requires.
- Import and export documentation, certificates of origin, insurance.
- Insured sea, air and secure road into Dubai and onward to custody.
- Custody worldwide via TransGuard, Brinks, Loomis and partners.
- Advisory for Europe, Switzerland, the UK, the US and Asia — still B2B, still physical metal.

Initial trades on CIF. FOB is available once the institutional relationship is established. Pricing is not a live ticker on the website. The desk quotes on assay-confirmed weight and fineness, less a small institutional discount on cleared lots.

COMPANY

How a mandate works

A mandate with AULM is a written relationship, not a chat. Metal form, origin, approximate weight and the papers you already hold come first. The desk tells you what is missing. Nothing is “priced firm” on a photograph of a bar in a hotel room.

Onboarding is the gate. Company KYB, beneficial owners, the stamped onboarding pack, and identity checks sit on file before a lot moves. An e-meeting follows. After compliance clears, the SPA and operational procedure are the trade — not a side letter from a broker.

Typical sequence

- Write — form, origin, weight, documents. The desk replies with the intake pack.
- KYC / KYB — onboarding, e-meeting, identity verification of beneficial owners.
- Documents — FCO then SPA. A seller representative is present through the transaction.
- Movement — CIF into Dubai on first trades. AULM takes clearance, TransGuard handling and delivery to the named refinery once the lot is ours to handle.
- Assay — independent fire assay; weight and fineness agreed with the representative at the office.
- Final purchase agreement on assay figures, then SWIFT MT103 bank-to-bank.
- Payment receipt signed both sides. Transaction complete.

We do not accept bank guarantees, SBLCs, letters of credit, proof-of-funds theatre or third-party financiers. Settlement is SWIFT MT103 after assay, between approved accounts only. We do not deal with unverifiable intermediaries or brokers without direct principal authorisation.

WHO WE ARE

Swiss–German roots. Dubai desk.

THE BOOK

Gold

Gold is the core book. We buy doré and scrap. We sell LBMA bullion. Intake lots are assayed and documented before a price is firm. Onward sale is allocated bars with a named stamp — not a paper claim.

Accepted forms include doré, bullion, nuggets, dust and scrap. Doré, scrap and bullion are not the same filing. An undocumented melt does not become Good Delivery because someone asked for a London price.

Who we deal with: family offices, licensed traders, funds and refiners. B2B only. Minimum 500 grams. Maximum two tonnes per month per client from Q2 2026 on continuous mandates.

Every gold mandate carries OECD due diligence, chain of custody and bank-to-bank settlement. No cash, no crypto, no third-party payment agents. Europe and Switzerland on this desk are refined bars only — 99.999 percent. No doré, no scrap, no artisanal intake in Europe.

THE BOOK

Silver and copper

Silver

Silver sits next to gold on the same desk: documented origin, assay where the form requires it, and delivery loco London or to a named vault. Bars, grain and industrial form. Industrial offtake and investment bars are different filings — say which book you are filling.

Same onboarding as gold. No trade before identity verification and an e-meeting. Settlement bank-to-bank on allocated metal. Custody via TransGuard, Brinks, Loomis or your vault.

Copper

Copper is a physical industrial book, not a retail coin. Cathode and wire rod for manufacturers and traders. Pricing is benchmark-linked. Documentation follows the lot — origin, assay and export papers before anything is booked.

Delivery is specified on the mandate: port, plant or warehouse. AULM is the desk and counterparty, not a freight forwarder you hire after the goods have left. Same KYC stack as precious metals. Structured lots — write with grade, volume and destination.

On the ground

Africa · Asia · Europe · Dubai intake

PRESENCE

Where we work

Africa, Asia, Europe — and South America when that corridor is documented end to end. One desk. Documented metal. Arbitrary agents extract the margin and leave the mine with the risk. Local and artisanal operators get more value and more security when they sell to a documented desk: fair terms, OECD due diligence, and a path into Dubai that does not depend on whoever shows up with cash.

Africa

Mine interests, collection warehouses and artisanal gold from inspected, state-approved mines. Presence means stakes, people on site, and a counterparty the mine can call again — West, Central, North and East Africa included. Lots are received, checked and held under chain of custody before they move.

We are working toward our own export licence so gold won locally can move in a closed loop: origin, warehouse, assay, export and Dubai intake under one responsible counterparty. The licence is not granted yet. Until it is, every lot still moves under existing permits, OECD due diligence and bank-to-bank settlement.

Asia

Corridors into Dubai for documented intake. Same OECD screen, same chain of custody — no informal melt, no arbitrary agents.

Europe / Switzerland

Trading of refined bars only. No doré, no scrap, no artisanal intake in Europe. The Swiss and European leg is allocated, refined metal.

South America

We are not originating in South America yet. When the corridor is documented end to end, it will sit on the book. Not before.

ORIGIN

Responsible sourcing

ORIGIN

Responsible sourcing

AULM is committed to high-quality product and to ethical standards on origin. Extraction, trading, handling and export of minerals from conflict-affected and high-risk areas can carry serious harm. We respect human rights and we do not contribute to conflict. Origin is the mandate — inspected, state-approved mines, documented lots before a price, not after the metal has already moved.

OECD due diligence starts at the pit. Chain of custody from the ground, not from a Dubai spreadsheet. Supplier contracts carry our responsible-sourcing policy. CAHRA screening on origin corridors, including West, Central, North and East Africa.

How every lot is treated

- OECD due diligence on the supplier and the corridor — not an optional add-on.
- Independent assay and lot documentation before a firm price.
- Certificate of origin, customs and insurance on every accepted mandate.
- SWIFT MT103 between approved accounts. No cash, crypto or third-party payers.
- Grievances to contact@aulmtrading.com — logged, investigated, retained five years.

ORIGIN

Due diligence and compliance

We adopt and put into supplier contracts a policy on responsible sourcing from CAHRAs. We will not finance conflict. We comply with United Nations sanctions and applicable domestic law. We do not tolerate torture, forced labour, the worst forms of child labour, widespread sexual violence, war crimes, crimes against humanity or genocide in the supply chain we accept.

We will not support non-state armed groups through extraction, transport, trade or export. We will not support public or private security forces who illegally control mine sites or extort along the route. Where security is contracted, engagement follows the Voluntary Principles on Security and Human Rights.

No bribes to conceal origin or to misrepresent taxes, fees and royalties. We support the elimination of money laundering tied to illegal taxation in mineral supply chains. Taxes and royalties from CAHRAs are paid to governments and disclosed in line with EITI principles where they apply.

AULM adheres to UAE and international sanctions, including relevant UNSCRs, UAE Cabinet Decision No. 74 of 2020, and FATF Recommendations 6 and 7. Customers, transactions and beneficial owners are screened. Listed persons are frozen without delay. Suspicious activity is reported via goAML.

This is how every mandate works — not a separate product. KYC/KYB, documented chain of custody, bank-to-bank settlement only.

ORIGIN

Climate on the desk

We try to go as green as possible on the ounces we move. Solar arrays at origin warehouses power lighting and machinery — crushers, pumps, assay lamps. Diesel last. The desk reports on climate in line with the EU conversation our counterparties already have. African corridors where the grid is already going renewable are preferred when the papers and the metal both clear.

Lower CO₂ is not a substitute for origin. A green warehouse on an undocumented lot is still an undocumented lot. Climate sits next to OECD due diligence, not instead of it.

Supply chain

Insured ocean freight · Air into Dubai · Secure road

MOVEMENT

From pit to vault

AULM runs physical gold, silver and copper from African and global corridors into Dubai. Every lot is subject to origin verification, KYC/KYB and documented chain of custody before it moves — not as an add-on, as the operating model.

The same desk coordinates assay, partner refining, insured freight and custody worldwide. Counterparties deal with one IFZA-licensed trader in Dubai.

Four steps

- Sourcing — OECD due diligence on origin, CAHRA screening, supplier contracts that carry the policy.
- Assay and origin — independent assay, certification of origin, lot papers before purchase.
- Movement — insured ocean freight, air into Dubai, secure road. Corridors sit in the procedure library.
- Custody — delivery to client specification worldwide. Interim storage in Dubai where required.

AULM coordinates the mandate. Licensed carriers and security partners execute the physical move. We are not a public logistics product page. Movement is part of the trade file.

Assayed. Weighed. Settled.

48-hour fire assay · Partner refineries · Bank-only settlement

REFINERY

Assay, refining, settlement

AULM coordinates institutional refining and offtake for doré gold, alluvial dust, nuggets and non-LBMA bullion bars — documented supply chain, 48-hour fire assay and bank-only settlement. Refining is performed by independent licensed partner refineries. AULM coordinates intake, compliance routing and settlement instructions. Assay timelines, pricing and acceptance follow partner terms, material condition and the jurisdiction.

What we take

- Doré — unrefined bars from licensed producers, origin and chain of custody before intake.
- Dust — alluvial and concentrate, weighed, sealed, fire-assayed within 48 hours.
- Nuggets — verified sources only; enhanced due diligence before purchase.
- Non-LBMA bullion — re-melt or structured exit after assay and compliance clearance.

Sellers receive best market value on assay-confirmed weight and fineness, less a small institutional discount on cleared lots. MT103 on T+1 after the assay is agreed. Mandates can be structured for LBMA good delivery or non-LBMA product for re-melting or tax-free transport where jurisdiction and papers allow.

We will not purchase anonymous or non-compliant flows. Traceable provenance, AML clearance, partner refinery acceptance and bank rails are required. Prior written approval from compliance on every mandate.

DESK

Working with AULM

Open an account on aulmtrading.com. Download the onboarding pack, complete it, stamp it, and submit it with the KYC flow. Beneficial owners complete passport and face checks. Compliance writes back. There is no public client dashboard — the desk contacts you.

Documents, gold and silver buying procedures, and this brochure sit on the Documents page. Read the procedure that matches the metal before you write.

What we will not do

- Bank guarantees, SBLCs, letters of credit, or similar paper.
- Third-party financiers or instruments issued to someone else's bank.
- Cash, crypto, or payment agents who are not the named counterparty.
- Undocumented melt, informal agents, or lots without origin.
- Retail, walk-in, or "proof of funds" theatre in place of KYC.
